Abbreviations and Acronyms

This section provides a list of abbreviations and acronyms with their appropriate full forms to improvise user comprehension.

Abbreviation	Full form
EMV	Europay, Mastercard and Visa
ISO	Independent Sales Organization
POS	Point of Sale
Sub-ISO	Subsidiary Independent Sales Organization

Introduction

At Valor PayTech, we curate innovative solutions for all your business needs. With our top-notch products and solutions, we deliver an exemplary contribution towards leaping your business to greater heights. Valor delivers user-friendly features crafted with meticulous planning and organization to ease business transactions. The fleet card features on our VL500 and VL550 POS terminals is another step forward in creating seamless and efficient payment experiences for merchants and customers in petroleum industry. Our fleet card functionality makes managing fuel transactions easy, enhancing operational efficiency and ensuring customer satisfaction. This document elaborates on the key functionalities of the fleet card feature across Valor platforms.

Objective & scope

This user guide is prepared to provide a detailed explanation of the fleet card feature to users. It will briefly address the prerequisites required for utilizing this feature, the step-by-step procedure for performing fuel transactions, and other effective fleet card functionalities to enhance the end-user's understanding of this feature.

Prerequisites

The Fleet Card Acceptance is an efficient feature designed for ISOs and merchants in the petroleum industry to process fuel-related transactions seamlessly. This feature can be facilitated by the ISOs and merchants through Valor Portal. To utilize this feature, the ISOs and merchants need to have login access to the Valor Portal. The Valor Portal can be accessed by the following link provided: https://online.valorpaytech.com/login

Benefits

The fleet card functionality is packed with benefits that enhance the overall transaction experience for businesses in the fuel industry:

• **Product Management:** Fleet cards enable merchants to easily track and manage their fuel and service-related products through the Valor Online Portal. Merchants can efficiently update product details, ensuring smoother operations and preventing lost sales opportunities.

- **Customization and Flexibility:** Merchants can customize their offerings through the Valor Portal, ensuring that only specific products or services are available for fleet card purchases. This gives merchants greater control over which products are linked to the fleet card, improving customer experience, and maintaining more accurate records.
- **Speed Up Transactions:** Instead of scrolling through product lists, merchants can simply enter the product code on the POS device to instantly add items. This streamlined process allows for faster transactions, reducing wait times and enhancing overall customer satisfaction.
- Enhanced Customer Loyalty: By offering fleet cards, merchants can enhance their relationships with fleet operators, providing a simple and reliable payment option for regular customers. This improves customer loyalty and encourages repeat business, driving long-term revenue growth.

Getting started

Portal functionalities in Fleet Card

The Valor Portal provides merchants and ISOs with a backend system to manage fleet card transactions efficiently. Through the Portal, users can configure fuel products, define product categories, and oversee their fleet inventory with ease. The Portal's structures framework allows for streamlined product management, ensuring that all fleet-related transactions align with the merchant's business operations.

Fleet Merchant Onboarding in the Valor Portal

1. Login to the Valor Portal

The ISOs must enter their respective credentials on the Valor Portal and the homepage will appear.

Fleet Transactions in the Valor Portal

This section provides step-by-step instructions for using the fleet transactions in Valor Portal.

1. Login to the Valor Portal

The merchants must enter their respective credentials on the Valor Portal and the homepage will appear.

Figure 5: Homepage of the Online Portal

2. Navigate to the "Fleet" Section

In order to access the fleet option in the Valor Portal, the merchant must navigate to the "Settings" option, followed by "Fleet". Here they can categorize their fleet-related products under the Products, Product Types and Product categories. This helps ensure that each product is correctly classified and makes it easier to retrieve when processing transactions.

POS functionalities in Fleet Card

Fleet Card is an exclusive feature available for payments processed via POS terminals. As mentioned earlier, this feature allows the merchants to process fuel-related transactions within the POS terminal. Merchants can effortlessly navigate the VL500 and VL550 POS interface, select fuel types, verify vehicle details, and complete transactions with minimal effort.

Performing fleet transactions with POS terminals

This section elaborates on the process of completing a fuel transaction with the POS terminal.

1. Select Fuel Type

To initiate a fleet card transaction, the user taps the "Fuel" icon on the POS terminal. This action prompts to choose the type of fuel the customer wishes to purchase. The available fuel types depend on the products configured in the Valor Online Portal, so it is important for the user to keep this information updated to ensure accurate pricing and selection.

Figure 9: POS terminal displaying Fleet inventory

Figure 10: POS listing the product code

2. Select Product or Service

After selecting the fuel type, the user may need to choose additional products or services based on the customer's request. This could include vehicle maintenance services or in-store items. The user should tap the "Service" or "Store" option and select the appropriate service or product. This can also be done by typing the product code at the search bar.

Figure 11: POS listing the product code Figure 22: Selecting a product in Fleet inventory

3. Enter Transaction Details

Next, the user should enter the transaction details, including product quantities, pricing, and any applicable discounts or promotions. The POS terminal displays a summary of the transaction for review. It is crucial for the user to confirm that all details are accurate before proceeding.

Figure 13: Adding quantity and price of items

4. Vehicle Verification

To complete the transaction, the POS terminal verifies the vehicle's information, such as the odometer reading, Vehicle ID, driver number, and user ID. This verification step helps ensure that the transaction is linked to the correct vehicle and that payment is processed accurately. If there are any discrepancies, the terminal prompts the user for adjustments.

Figure 15: POS terminals verifying Odometer and Vehicle ID

5. Complete Payment

After verifying all transaction details, the user proceeds to process the payment. The fleet card is charged for the selected fuel, products, and services, thereby completing the transaction through the POS terminal.
